The Jadex project is hosted by sourceforge.net , a well-known open-source development website. Therefore, several project specific functionalities are directly available on sourceforge. In the following these features will be explained in detail.

Wiki: The Jadex site has been set-up as a Wiki, which allows all Jadex users to participate in providing content. To edit pages, you have to [register at this Wiki](#). It might take a short time before edit rights are enabled for your new account. If you still can't edit pages after a few days, please [drop us a note](#) . With your account you can help improving the content or even add new information. Examples of content we really would like to see emerging are [teaching material](#) , descriptions about [projects using Jadex](#) and also the [FAQ](#) (frequently asked questions) section.

Forums : Two different kinds of discussion forums exist. In the [help forum](#) you can post your questions about the usage of Jadex and the [open discussion forum](#) is intended for all kinds of debates on topics related to Jadex or agents in general.

Trackers : There are several trackers, that allow you to comment various topics. Whenever you found out that something is behaving odd while using Jadex we encourage you to give us a hint via a [bug report](#) . If you are using Jadex and realize that there is missing something or have an idea for an improvement we would be grateful if you let us know via a [feature request](#) .

Mailing List : The Jadex mailing list ([jadex-develop](#)) can be used for all kinds of discussion concerning Jadex. We are very interested in your thoughts about the architecture and further improvements. You can also browse the [mailing list archive](#) .
